PRODUCT DETAILS

- Self-Adhesive UV Light Detection Labels
- Permanent Record of UV Light Exposure
- Ideal for UV Disinfection, Curing, and Detection Applications

UV Light Detection Labels are self-adhesive labels that change color irreversibly upon exposure to UV light. The color density of the labels changes from white to blue with increased exposure time and distance, creating a permanent record of UV light exposure. UV Light Detection Labels are available in packs of 20 with ½ inch square dimensions and are ideal for germicidal disinfection, surface sterilization, UV curing, or general UV light detection applications.
